The information in this document pertains to the testing program(s) agreed upon between Vertical Laboratories LLC and its client. This document has been prepared for the use of the client and shall not be reproduced except in full without documented approval from Vertical Laboratories LLC. This document may be altered or revised by Vertical Laboratories personnel only and shall be noted in Version History. The information and results herein are relevant only to the sample(s) identified in this document and received from the client. All testing is performed at the address above unless otherwise noted within the document. When statements of conformance are made, Vertical Laboratories employs a decision rule that utilizes simple acceptance, with a TUR of 4:1 or greater whenever possible.

Summary of Testing

An Ultra Motion Servo Cylinder underwent Pressure testing in accordance with 23106 Scope of Work. The actuator was tested at different pressurized set points to verify functionality at 15ksi. The actuator experienced no loss of connection or damage after being pressurized. Refer to the Test Data page for detailed results regarding the actuator.

Pretest Sample Conditions

Test sample had no visually apparent defects when received.

Posttest Sample Conditions

Test sample had no visually apparent defects after testing.

Serial Number	10123256		
Equipment Used	WT012, VL29		
Test Specification	23106 Scope of Work		

Test Parameters

Note: Actuation consists of full extension and retraction.

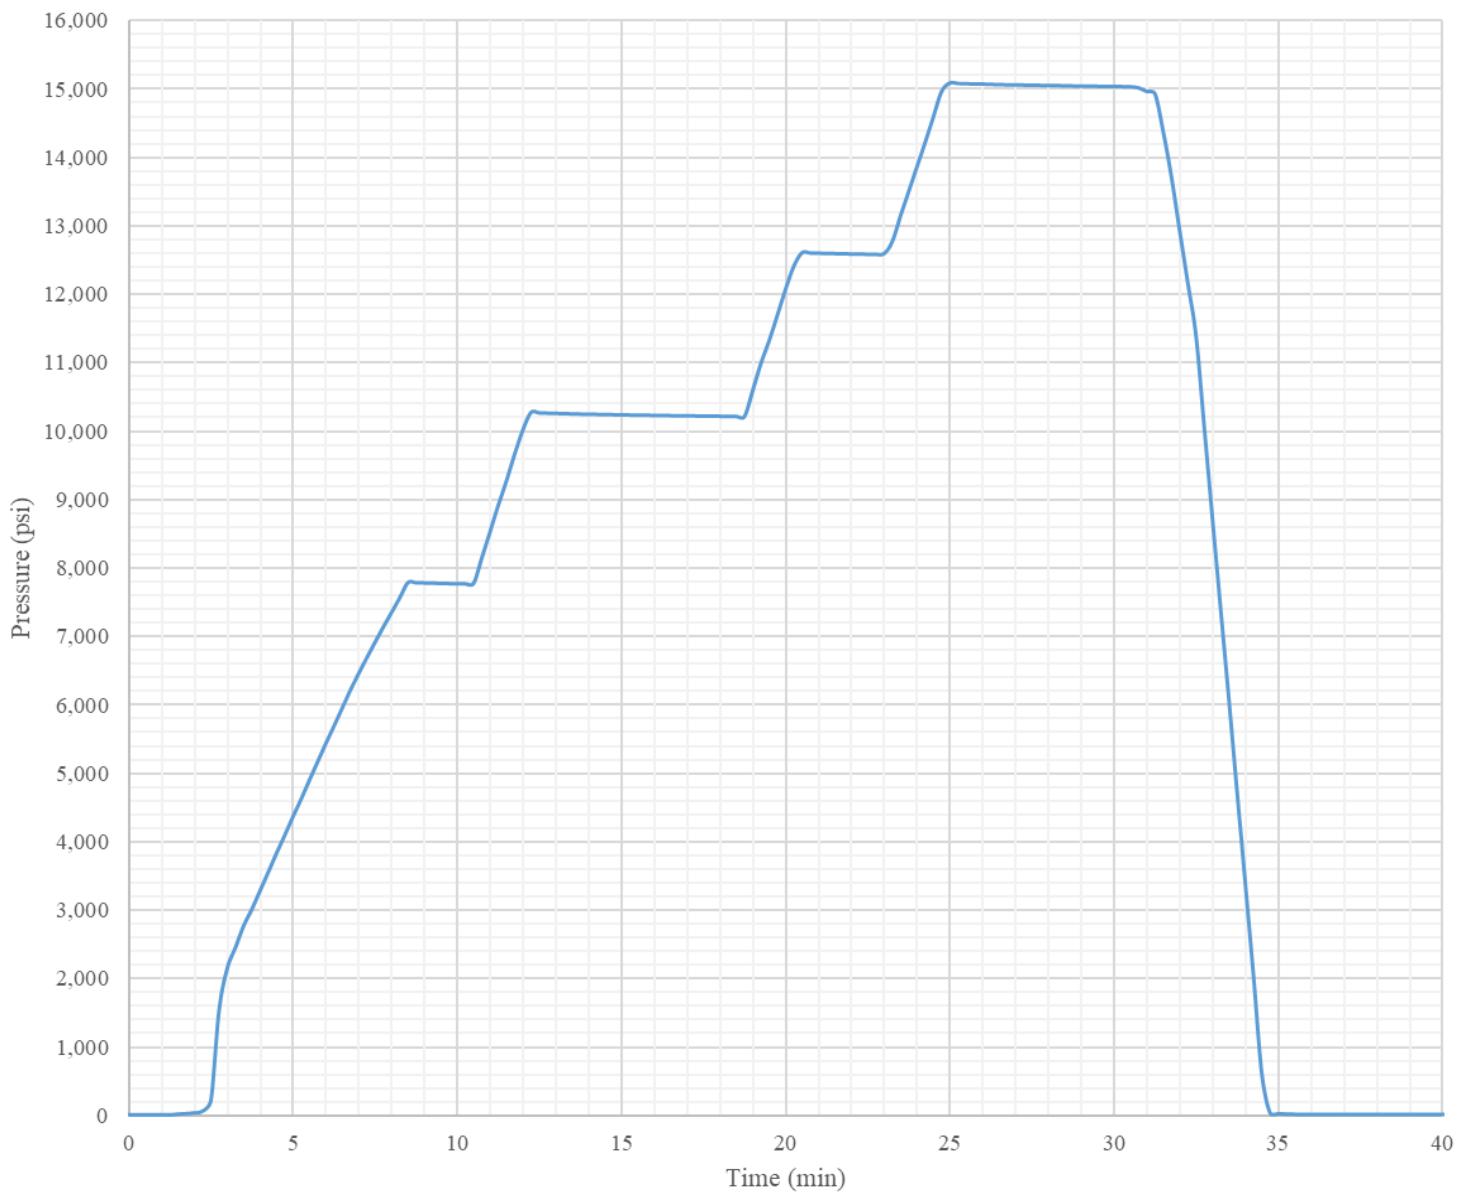

1. Test actuator at ambient temp prior to placing in vessel to assure functionality.
2. Mount actuator to test fixture, place in water filled vessel and begin recording pressure.
3. Test actuator submerged in water prior to pressurizing vessel.
4. Pressurize vessel to 7,500 psi and hold for 2 minutes.
5. Actuate test unit.
6. Pressurize vessel to 10,000 psi.
7. Actuate test unit upon reaching 10,000 psi.
8. Hold at pressure for 5 minutes.
9. Actuate test unit after 5 minute hold.
10. Pressurize vessel to 12,500 psi and hold for 2 minutes.
11. Actuate test unit after 2 minute hold.
12. Pressurize vessel to 15,000 psi.
13. Actuate test unit upon reaching 15,000 psi.
14. Hold pressure for 5 minutes minimum.
15. Actuate test unit after 5 minute hold.
16. Bring pressure down at a minimum rate of 500 psi/min to ambient pressure.
17. Stop recording pressure and remove test unit.
18. Inspect test unit for damage and functionality.

Pass/Fail Criteria:

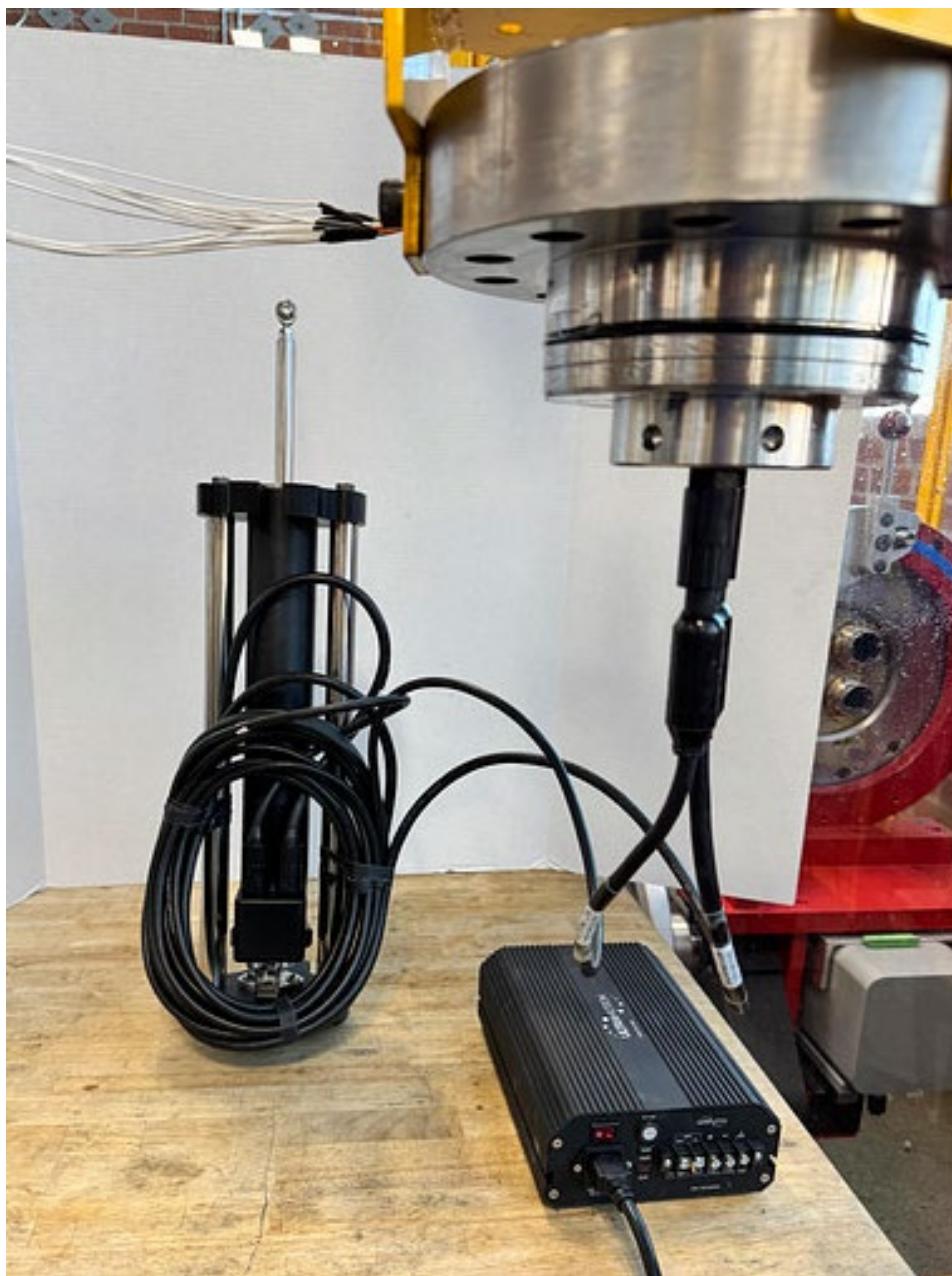

1. No loss of connection to test unit.
2. Actuation at all pressure intervals with full extension and retraction.
3. No damage to test unit after pressure testing.

Testing Results			
Pressure (psi)	Hold Time (min)	Pre-Pressure Hold	Post-Pressure Hold
Ambient	-	Actuation verified prior to submerging in water	N/A
7,500	2	Not Tested	Successful actuation
10,000	5	Successful actuation	Successful actuation
12,500	2	Not Tested	Successful actuation
15,000	5	Successful actuation	Successful actuation
Ambient	-	N/A	Successful actuation verified while submerged and after removal
Test Notes			
Intermediate pressure values of 7,500 and 12,500 psi were not actuated upon achieving initial pressure rating but verified post-pressure hold time. The actuation process involved full extension and retraction with software continuously confirming its position at each stage of testing.			

Ultra Motion AUQ Servo Cylinder Testing to 15ksi

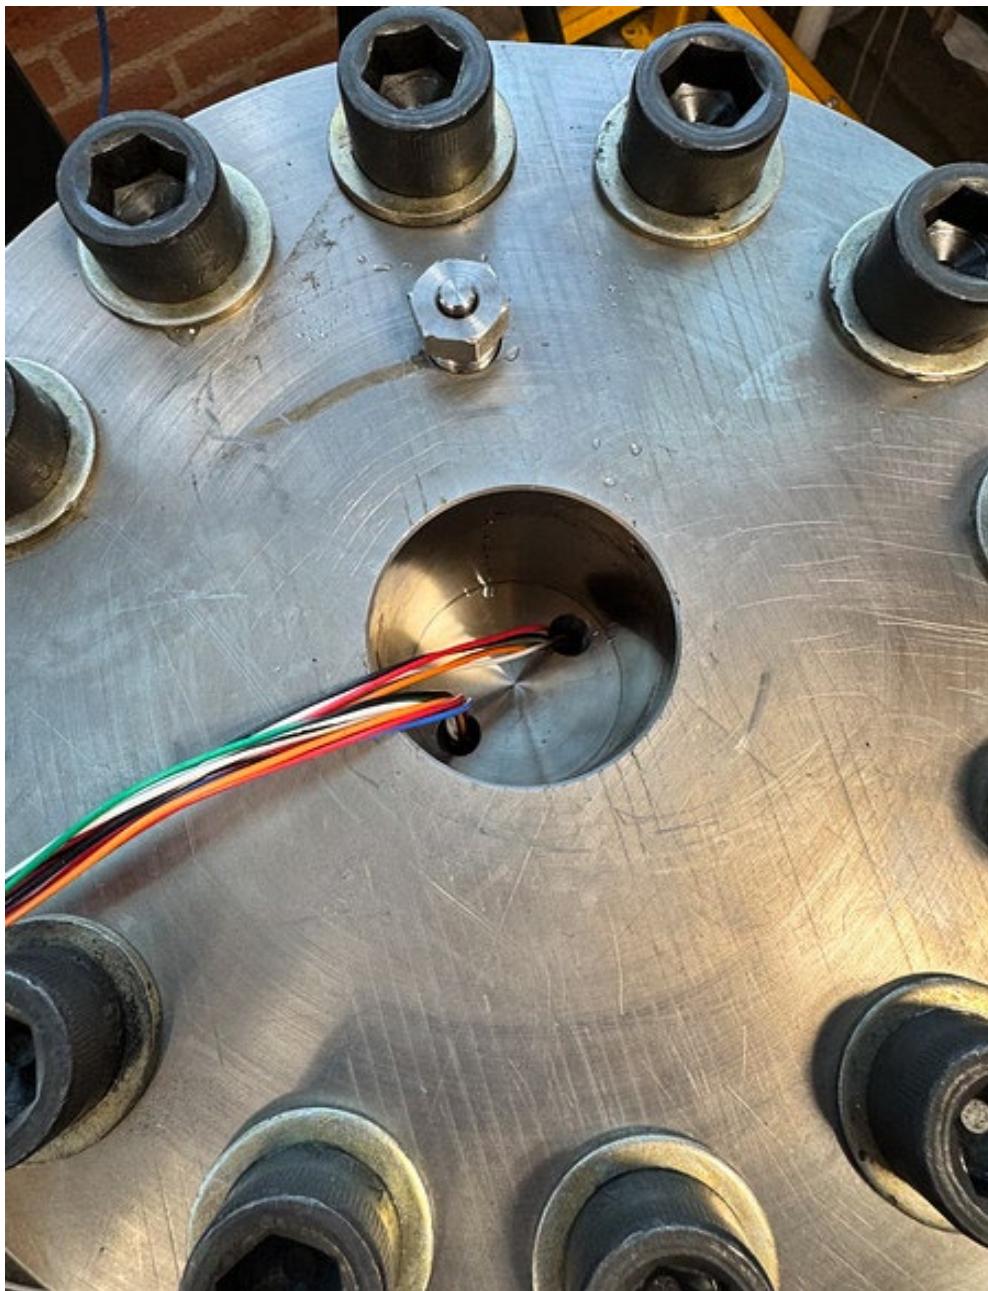

Description	AUQ Servo Cylinder Pressure Test Plot
Test Name	AUQ Servo Cylinder Pressure Test
Part Name	Ultra Motion AUQ Servo Cylinder
Test Group	1
Part No.	AUQZ8D-B5M0E4, Female-Female AU Cable Set-5 Meter, MCBH8MAS, MCBH5MAS
